

OptiLiner™ Flange Brace Cover

The OptiLiner™ System offers a patented, unique Flange Brace Cover that addresses the issue of cutting the liner fabric around flange braces.

This OptiLiner™ option maintains the structural integrity of the metal building manufacturer's design and eliminates need for flange brace clips from metal building manufacturers. It provides cosmetic and aesthetic qualities by covering flange brace fabric penetrations with OptiLiner™ fabric. Flange Brace Covers are easy to install - simply slide over flange brace and up to fabric liner, and secure with two screws.

The Flange Brace Cover is an OptiLiner™ "option" that may be purchased with the OptiLiner™ System.

See Flange Brace Cover Installation Instructions for details.
